Shuoxiang Photovoltaic Panel Line

Overview

Is polysilicon a bottleneck for solar PV?

Global capacity for manufacturing wafers and cells, which are key solar PV elements, and for assembling them into solar panels (also known as modules), exceeded demand by at least 100% at the end of 2021. By contrast, production of polysilicon, the key material for solar PV, is currently a bottleneck in an otherwise oversupplied supply chain.

Will a wave of polysilicon projects address a raw material shortage?

A wave of polysilicon projects will address a raw material shortage that pushed solar panel prices higher and threatened to slow adoption of clean energy. Photovoltaic panels at a solar farm in Qinghai province, China. This article is for subscribers only.

Does masking a photovoltaic cell cause excessive VOC loss?

We sent one of our cells to an accredited photovoltaic calibration center for certification and obtained a certified PCE of 22.3% (fig. S29). Although masking helps to ensure the accuracy of the illuminated area, it induced excessive VOC loss because the unilluminated region of the device caused additional dark currents (fig. S30).
