Smart Microgrid Control Strategy

Overview

What are the strategies for energy management systems for smart microgrids?

There are many strategies for energy management systems for smart microgrids such as load management, generation management, and energy storage management 4. The control system of a microgrid must continuously analyze and prioritize loads to maintain a balance between power generation and consumption.

How can power management control a microgrid?

Majority of the researchers have proposed power management control aspects using decentralized or coordinated control strategies. While, the current strategies based on traditional controllers in microgrid are appropriate for voltage control, the inadequate control of frequency still exists.

What is a smart microgrid?

Smart microgrids (SMGs) are small, localized power grids that can work alone or alongside the main grid. A blend of renewable energy sources, energy storage, and smart control systems optimizes resource utilization and responds to demand and supply changes in real-time 1.

What is a microgrid controller?

Practically, microgrid controllers are designed to perform certain operation to serve multiple control objectives as listed down , . Bus voltage control and frequency control under both grid-tied and islanded operating mode. Control of real and reactive power realizing better power sharing during both grid-tied and islanded operating mode.

How can a microgrid improve the performance of SMG?

Looking at the rise in population and power demand, the AC, DC, and hybrid microgrid applications are gaining interest. Many researchers suggested

different robust control techniques, storage devices, and inverter topologies to improve the performance of SMG by providing better stability, voltage, and frequency control.

Can hybrid microgrids be controlled?

Despite the merits of HMG, the coordination and control of hybrid microgrid are becoming a challenging issue. To solve these problems, in References 112, 116, 117, and 118, different control solutions are provided for HMG operation.
