Smart microgrid can be defined as the electricity grid that makes electricity generation, distribution, and adjustment of the electricity flow given to local electrical consumers in a smarter way.

Smart microgrid can be defined as the electricity grid that makes electricity generation, distribution, and adjustment of the electricity flow given to local electrical consumers in a smarter way.

A microgrid, regarded as one of the cornerstones of the future smart grid, uses distributed generations and information technology to create a widely distributed automated energy delivery network.

Smart microgrids (SMGs) are small, localized power grids that can work alone or alongside the main grid.
