Solar Thermal Power Generation Research Institute

Overview

How to integrate solar thermal energy systems with industrial processes?

The integration of solar thermal energy systems with the industrial processes mainly depends on the local solar radiation, availability of land, conventional fuel prices, quality of steam required, and flexibility of system integration with the existing process.

Is solar thermal energy a suitable solution for process heat applications?

Heat energy is preferred as compared to electrical energy to meet the energy requirement of various applications in the process industries. Therefore, the solar thermal energy system is considered to be one of the attractive solutions for producing thermal energy for process heat applications.

Why are solar thermal power plants important?

Since solar thermal power plants can feed their electricity into the power grid even after sunset, they are of particular value for an energy system based on renewable energy sources. Solar thermal power plants are of strategic importance in sunny countries to be able to phase out coal and gas power plants in the future.

Are solar thermal power plants the future of energy?

With approximately six gigawatts of installed capacity worldwide in 2020, solar thermal power plants are still at the beginning of their market introduction, comparable to photovoltaics 15 years ago or wind energy 25 years ago.

Where can I find high-temperature solar thermal research in Australia?

Our Energy Centre in Newcastle contains the only high-temperature solar thermal research facility of its type in Australia, home to the largest high-concentration solar array in the Southern Hemisphere. The site has two facilities: Solar Field 1 and Solar Field 2.

What are the industrial applications of solar thermal energy?

In this article, an extensive review of various solar thermal energy technologies and their industrial applications are presented. The following industries are covered: power generation, oil and gas, pulp & paper, textile, food processing & beverage, pharmaceutical, leather, automotive, and metal industries.
