# Solar balloons generate electricity

## Overview

---

Solar balloons can be employed to produce electric energy with an efficiency estimated around 3% for large balloons (100 m of diameter) and a good irradiation.

Solar balloons can be employed to produce electric energy with an efficiency estimated around 3% for large balloons (100 m of diameter) and a good irradiation.

Solar balloons, in which solar radiation is used to heat directly the air in a hot-air flying balloon, can be used as a mixed power system that exploits both solar radiation and high-altitude winds.

The researchers explain how their solar balloons will directly convert sunlight to electricity during the day, and then produce hydrogen, which works as an energy storage medium for producing elect.
