Overview

Can you use solar panels without battery storage?

If battery storage isn't in the cards for now, don't worry! You can still use your solar panels to power your home without battery storage. In fact, a majority of home solar systems aren't connected to battery storage. Here's how it works: Early morning and evening are times with lower solar production, but higher energy needs.

How does a solar system work without battery storage?

Without battery storage, solar systems typically use the utility grid as a battery. Solar energy is first used to directly power your home and the excess energy is pushed onto the local grid to power neighboring systems. When the solar system is underproducing, the home draws electricity from the local grid.

Do solar panels power your home at night?

During these times (and especially at night) solar owners without battery storage draw power from the grid, which acts as a giant energy backup system. But during the day your solar panels are likely providing more than enough energy to power your home. The excess energy is sent into the grid to power your local community.

When do solar panels need a lot of power?

That's when you'll need a lot of power, but also when solar panel production is just getting momentum or tapering off. During these times (and especially at night) solar owners without battery storage draw power from the grid, which acts as a giant energy backup system.

Do home solar systems have battery storage?

In fact, a majority of home solar systems aren't connected to battery storage. Here's how it works: Early morning and evening are times with lower solar

production, but higher energy needs. You're waking up and getting ready for the day, or making dinner and doing homework with the kids.

Do you need a solar battery bank?

You essentially use the local utility grid as a battery to "store energy" without needing a solar battery bank in your home. If you have your own battery storage, you likely won't transfer much energy to or from the grid. You store your own energy and pull from that, and the grid serves as a backup to the backup.
