What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

What is a solar photovoltaic cell?

The Solar Photovoltaic Cell (Solar Cell) converts sunlight (photons) into electrons as Direct Current (DC). Photo means light, while voltaic means electricity; light-electricity is its literal meaning. The PV power system at the first instance, generates DC, which is not constant and fluctuates with sunlight intensity or lack of.

What is a photovoltaic system PV module?

Photovoltaic systems PV modules are manufactured by assembling an array of solar cells. The most common PV modules today have a power capacity between 300 and 500 W, which corresponds to an area between 1.5 and 2.5 m<sup>2</sup>, assuming 20% module efficiency ( Fig. 1.3 ).

What are the advantages and disadvantages of solar PV power generation?

There are advantages and disadvantages to solar PV power generation. PV systems are most commonly in the grid-connected configuration because it is easier to design and typically less expensive compared to off-grid PV systems, which rely on batteries.

How does a photovoltaic system work?

A photovoltaic (PV) system is able to supply electric energy to a given load by directly converting solar energy through the photovoltaic effect. The system structure is very flexible. PV modules are the main building blocks; these can be arranged into arrays to increase electric energy production.

How can a solar PV system make a dual use of infrastructure?

This could be achieved by involving the neighbors from the planning phase, enabling their economic participation in new power plants, or creating energy communities, in which members co-own the new PV installation. Furthermore, the low cost achieved by solar PV opens new possibilities for PV systems making dual use of infrastructure.
