Solar photovoltaic panels exposed iron wire

Overview

Do PV systems need exposed cable wiring?

A common thread in the installation of electrical systems is that the work be done in a neat and workmanlike manner [NEC 110.12] and that conductors are not exposed to physical damage [NEC 300.4]. These two important concepts are at times overlooked in PV systems when installing exposed cable wiring methods.

Which wiring methods are applicable for photovoltaic (PV) systems?

In general, the wiring methods presented throughout the Code are applicable for photovoltaic (PV) systems. More specifically, Part IV of Art. 690 is titled “Wiring Methods,” which helps us establish the fundamental requirements for conductor selection and installation for PV systems.

Can a PV system use a single-conductor cable?

One of the most significant allowances for PV systems is the ability to use exposed single-conductor cables for the circuits within the PV array as called out in 690.31 (A). USE-2 and PV wire (a relatively new, double-jacketed single conductor cable) are specifically called out as acceptable conductors.

How to wire solar panels together?

Wiring solar panels together can be done with pre-installed wires at the modules, but extending the wiring to the inverter or service panel requires selecting the right wire. For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard.

What type of cable do I need for a solar array?

For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard. For ground-mounted PV installations requiring underground installations, you need an Underground Service Entrance (USE-2) cable. Are you using microinverters or string

inverters for your array?

.

What type of wire does a PV module use?

The cables also have quick-connect plugs installed to facilitate easier field wiring associated with PV modules. The home run cables from the modules to the external junction or combiner box for the entire array will use the USE-2 or PV wire called out in 690.31 (A).
