Solar power generation system inspection items

Overview

This procedure includes system nameplate rating (kW), solar irradiance measurement (W/m²) and module cell temperature (C). Who should complete a solar energy inspection and maintenance checklist?

Inspection and maintenance checklists should be completed by the electrician performing the inspection, and a copy given to the owner for their records. Owners should keep records of all inspections and maintenance of their solar energy systems along with the documents provided when the system was originally installed.

Should solar energy systems be inspected?

e, solar energy systems should be inspected annually. Can I alter the checklist?

This checklist is provided as an example only. Other maintenance information may have been provided when the system was first installed. Electricians may also customise this form to suit their needs.

Why is electrical testing important for solar power generation systems?

Proper maintenance is necessary for the safe and reliable functioning of long-term solar power generation systems for decarbonization. So conducting electrical testing on the system according to the international standard is important. This article discusses the DC side testing of the IEC 62446-1 standard.

What is a DC test for a solar PV system?

This standard also describes DC testing of the PV system, which can also be used for periodic testing of the system. In the standard, the test is classified into categories 1 and 2 according to the size of the PV system. Category 1 applies to all solar PV generation systems.

What are the safety standards for solar installations?

The relevant safety standard for solar installations AS/NZS 5033 also has an appendix outlining an example maintenance schedule and checklist (if your electrician does not have a copy of that standard they may not be the most suitable person to perform the work).

What measurement instruments are recommended for solar installation & maintenance processes?

Here are our measuring instrument recommendations for solar installation and maintenance processes. 1. Temperature measurement 2. OCV measurement 3. PV Insulation measurement 4. Bypass diode inspection 5. String Current measurement 6. Inverter efficiency measurement 7. Power quality measurement 8. Power generation measurement 9.
