## Overview

---

The above diagram indicates the basic concept of a solar air heater, and while there are many designs, the basic principle is the same - a small fan feeds interior air into a south-facing wall-mounted panel. Air is heated as it passes behind a black surface and is then returned to the conditioned space at a much higher.

The Achilles heel of most renewable energy generators like solar air heaters is reliability, but also energy storage. The wind doesn't always blow.

Web searches reveal an endless list of designs and assembly techniques for DIY solar air heaters, the same holds true for DIY videos on YouTube. Different designs will resonate differently.

If you incorporate thermal mass into a home to store and release heat, you can distribute the heat collected over a longer period of time, and there.
