Solar power off-grid system price

Overview

Off-grid systems cost an average of \$45,000–\$65,000—almost double the cost of a typical grid-tied solar system.*.

Off-grid systems cost an average of \$45,000–\$65,000—almost double the cost of a typical grid-tied solar system.*.

The national average cost of an off-grid system is \$55,000*, though your investment could range from \$20,000 to \$100,000 based on your system design and energy needs.

According to our research, off-grid home solar systems can cost around \$45,000 to \$65,000 — significantly more than traditional grid-tied panels.

An off-grid solar system will take time to pay for itself. Depending on the size, number, and quality of panels, your solar array will cost, on average, anywhere between \$5,000 and \$30,000.

Ultimately, the total price for an off-grid system can range anywhere from \$45,000 to \$65,000. How much does an on-grid solar system cost?

On-grid systems are built to support energy needs but do not serve as your only electricity source. This means they're smaller and cost less than off-grid options. The average cost of solar panels for an on-grid, 5 kilowatt-hour (kWh) system is \$15,000–\$20,000. An off-grid system costs more than twice as much.

How much does an off-grid solar system cost?

Off-grid solar systems can cost anywhere from a few hundred dollars for basic setups to tens of thousands for powering an entire house, depending on your energy needs. Despite solar's general benefits, off-grid systems truly shine for remote locations, avoiding blackouts, reducing energy bills, and lowering your carbon footprint.

How much does an off-grid energy system cost?

We recommend including an alternate energy source to support your home during extended periods without direct sunlight. The average off-grid system costs around \$55,000, but this price varies based on system size, type, and additional components.

How much does it cost to install an off-grid system?

The cost to install an off-grid solar system ranges from \$20,000 to \$65,000 before tax credits and rebates. Most homeowners spend around \$55,000 for an installed 7kW system for a home with average energy needs in a moderately sunny climate.

How much does a solar power system cost?

The cost of a solar power system differs depending on various factors such as location, equipment, and installation costs. However, on average, a 100kW solar system costs around \$88,800. This includes the cost of solar panels, inverters, mounting equipment, and other necessary components for a complete solar power system.

Is an off-grid solar energy system right for You?

However, off-grid energy systems are excellent for getting power to where you need it without a lot of hassle. Also, the cost of an off-grid solar energy system is typically far below that of an entire residential solar array and its components. But, choosing the system that meets your off-grid needs best can be daunting.
