Solar support on top of cabinet

Overview

What is above cabinet lighting?

It's safe, beautiful, energy efficient indirect lighting that lasts over a decade, tucked away above the cabinets. Above cabinet lighting (over cabinet) is very popular and is becoming a standard installation in the construction of new homes. **READ:** How to choose the best LED strip light for your project.

What if a cabinet has a toekick?

If the cabinet has toekick (can't see under it), it goes on subfloor. flooring protects sub-floor and back walls against any water/liquids under cabinets, from leaks and spills. This applies mostly to the sink cabinet, as usually flooring is provided under the other critical areas such as fridge, stove and dishwasher.

Should cabinets be installed on the subfloor?

Always an interesting choice. Most new construction puts cabinets on the subfloor. One of the reasons for doing this is to avoid damaging the new floors during construction. Floors are one of the last items to complete so it is much easier to install cabinets first.

Solar support on top of cabinet
