Solas system Iceland

Iceland will start receiving solar energy from space in 2030

British company Space Solar plans to provide residents of Iceland with solar energy from space by 2030. If successful, this could be the world's first demonstration of a new kind of renewable energy source. The system would produce electricity at about a quarter of the cost of nuclear power -- \$2.25 billion per gigawatt -- making it

Implementation Strategy

In the complex, non-linear system of the surface ocean and lower atmosphere, the five SOLAS core themes interact and influence each other. Understanding the processes involved and making predictions will not be possible by studying these themes independently.
