Sunpower 2024 United Kingdom

Overview

Will 2024 be the UK's first full year of low-carbon renewables?

2024 is set to be the first full year where UK low-carbon renewables generate more electricity than fossil fuels, with wind power close to becoming the single largest source of UK power for the first time. This report reviews power generation statistics for the UK across 2024.

Will UK low-carbon renewable power cross a significant threshold in 2024?

UK low-carbon renewable power will cross a significant threshold in 2024, overtaking fossil fuel generation for the first full year. 2024 saw the UK mark another significant milestone, closing its last coal power plant and joining a third of OECD nations now coal-free.

How much wind power will the UK generate in 2024?

UK wind power is currently forecast to generate 29% of UK electricity in 2024, totalling 82 TWh, which is 3 TWh less than fossil gas (85 TWh, 30%). The renewables future is here. This long-awaited milestone is a testament to how much progress the UK has made.

Could wind power overtake gas in 2024?

Wind power is close to overtaking gas. It's too close to call with only a 1% difference forecast, but depending on December's conditions, wind could overtake gas as the UK's largest source of electricity in 2024.

On August 5, 2024, SunPower (the "Company") announced that it entered into an asset purchase agreement (the "APA") with Complete Solaria, Inc. ("Complete Solaria") to acquire certain assets associated with SunPower's Blue Raven Solar business, New Homes business, and the Non-Installing Dealer Network business.

Wind powers a record summer for renewable energy in Britain

Gas power plants can be quickly and reliably ramped up when there is a surge in electrical demand or a lull in output from weather-dependent renewables like wind and solar. This makes phasing out gas particularly difficult. That's why the results from August 2024 are so encouraging: gas appears to be losing its dominance.
