4 Ways to Use Surplus Electricity Production from Solar Panels  
1) Join a Net Metering or Solar Buyback Program There are many electricity providers who offer net metering or solar buyback programs, which let you export surplus generation to the local grid.  
2) Recharge Electric Vehicles with Surplus Solar Generation .  
3) Store Solar Electricity in a Battery System .  
4) Activate a Heat Pump and Store Hot Water .

Here we will discuss 4 ways to use surplus power from a solar array: Joining a net metering or solar buyback program. Recharging electric vehicles with onsite charging stations. Storing surplus electricity in a battery system. Using surplus electricity to power a heat pump and store hot water.

The good news is that the direction for electricity investments is positive, with the share of renewables likely to grow rapidly spurred by government policies and falling costs. Yet the resultant growth of wind and solar power will lead to new integration challenges for today's power systems and these challenges will become greater over time.

The research aims to evaluate the quantity of surplus solar energy generated in off-grid systems. One objective is to identify the patterns of surplus generation to see if this surplus could be easily put to use. To achieve the aim, the researchers analysed various load consumption data for households with solar generation.

The presence of excess electricity constitutes a significant limitation to the wider implementation of renewable capacity in off-grid hybrid systems. Surplus power leads to reductions in energy efficiency, power supply reliability, total system stability, and affordability of renewable-based

systems. How much solar energy is surplus?

The use of hourly data for these households did not cause a significant error in determining the solar surplus. From this analysis, it is estimated that, on average, 50% of the solar energy is surplus. In most homes, the primary loads are connected in the evening, and the next day the battery is recharged from the solar module.

Can surplus solar energy be used in off-grid systems?

The research aims to evaluate the quantity of surplus solar energy generated in off-grid systems. One objective is to identify the patterns of surplus generation to see if this surplus could be easily put to use. To achieve the aim, the researchers analysed various load consumption data for households with solar generation.

What can I do with surplus solar energy?

If your electricity provider has a net metering or solar buyback program, you can sell surplus energy and get a power bill credit in return. - Another viable option is installing EV charging stations, and using surplus solar energy to recharge electric vehicles.

Is energy surplus a problem?

Based on literature, exceeding 10% of the energy surplus level indicates suboptimal energy efficiency in the renewable system. Surplus electricity is not a problem in some parts of the world, such as Europe, where most regions have access to the synchronous electrical grid.

How can we use surplus solar energy to recharge electric vehicles?

Another viable option is installing EV charging stations, and using surplus solar energy to recharge electric vehicles. - A battery system can absorb solar generation that is not being consumed, and that energy can be used when consumption is higher.

What can you do with surplus electricity?

Storing surplus electricity in a battery system. Using surplus electricity to power a heat pump and store hot water. Surplus generation happens regularly when a building has solar panels, since production and consumption do not always match. However, if the amount of unused generation is excessive, your

solar power system is probably oversized.
