## Renewable Energy 2024

The energy mix in the Netherlands consists of crude oil, natural gas, coal, renewable energy and other types of energy such as nuclear and energy from waste. The Netherlands has substantial natural gas reserves, but the government decided in 2018 to phase out the extraction of natural gas (mainly because of

earthquake concerns).

## Some pioneers of photosynthesis

Andreas Franz Wilhelm Schimper (1856-1901) was a French then German botanist (Figure 6). In 1880, he established that starch is both a source of stored energy for plants and a product of photosynthesis. In 1881, he showed that ...

The Solar PV solution increases the reliability of the operations, decreases the cost of fuel and removes harmful emissions by reducing the burden on diesel

**System Topology**

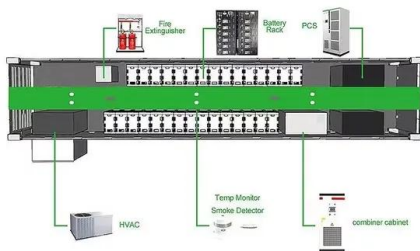

**The Netherlands , Dutch Marine Energy Centre**

On the road to a carbon-neutral energy system in 2035, ambitious targets are set by the Dutch government for both energy production (3GW offshore solar and 21GW of offshore wind by 2030) as well as energy carriers such as hydrogen (4GW by 2030). Perhaps even more ambitious are the underlying policy frameworks.

**Renewable Energy , Schimper Energy**
