# The impact of electromagnetic radiation on microgrids

## Overview

---

Microgrids, through their decentralized architecture, are less vulnerable to attacks on individual pieces of key generation or transmission infrastructure. Natural [124], [125] or man-made [126], [127], [128], [129] electromagnetic pulse (EMP) events could also have potentially catastrophic results. •.

Electromagnetic interference and renewable energy microgrids have an unavoidable impact on telecommunication systems. The influence of radiofrequency emissions from microgrids can not be ignored when designing a telecommunication system in its vicinity and vice versa.

1960s suggested that the electromagnetic effects of nuclear bombs detonated at high altitude (above 30 km) were potentially damaging to electrical grids, communications infrastructure, and other vital electronics-based systems many hundreds of miles away from the blast epicenter.

This document describes the main types of EMP weapons and the relative threats they represent. Also discussed are ways in which specifically designed EMP hardened thermal power plants, and their associated smart microgrids, can provide a safe, clean and reliable source of electrical power.

This paper presents a review of the microgrid concept, classification and control strategies. Besides, various prospective issues and challenges of microgrid implementation are highlighted and explained. Finally, the important aspects of future microgrid research are outlined.

### About Health Effects of Radiation , Radiation and ...

Radiation -- Energy moving in the form of particles or waves. Familiar radiations are heat, light, radio waves, and microwaves. One kind of ionizing radiation is a very high-energy form of electromagnetic (EM) radiation ...

### Radiation: Electromagnetic fields

In the area of biological effects and medical applications of non-ionizing radiation approximately 25,000 articles have been published over the past 30 years. Despite the feeling of some people that more research needs ...

### Effects of short and long term electromagnetic fields exposure ...

In addition to the cellular effects of electromagnetic radiation, the potential carcinogenic effects of EMF emitted by mobile phones has been investigated in various previous studies ...
