The neighbor next door is doing solar power generation

Overview

Do people who live near solar projects get notice?

This indicates that processes for giving notice to people who live near projects are not working. The most trusted sources of information are people who live near existing solar projects, community organizations and university staff. The least trusted are solar developers and government officials.

How many people live near solar projects?

A team that included researchers from Lawrence Berkeley, the University of Michigan and Michigan State University conducted the survey in 2023. The responses came from 984 people in 39 states who live near solar projects built between 2017 to 2021. The projects range in size from 1 megawatt to 252 megawatts. Among the other findings:

Should community solar projects be a part of the 2022 Sunny Awards?

The 2022 Sunny Awards required that projects reserve at least 40% of their capacity for low- to moderate-income households. Community solar projects can help deliver power to households and critical facilities during grid outages or otherwise strengthen the resilience of the grid.

Are solar projects a problem?

But solar opponents also can point to parts of the report that show serious concerns about development. For example, the survey found that people who live within three miles of projects that are 100 megawatts or larger have negative attitudes that outnumber positive ones by about 12 to one.

Where can a community solar project be built?

These projects can be built in many locations—on public buildings, private lands, brownfields like landfills, or even the roof of an apartment building. Depending on the size of the project and the amount of energy the customer buys from it, community solar can provide electricity for a handful of

households or hundreds of homes and businesses.

How can NCSP improve access to community solar projects?

To improve accessibility of community solar projects that serve LMI households, NCSP requires projects and programs recognized through the Sunny Awards provide at least 40% of their project's residential capacity to LMI households.
