# Three-screen solar monitoring bracket

## Overview

---

How many monitors can a 3 monitor mount hold?

Triple Monitor Mount revolutionizes your workstation with the capacity to hold three monitors, ranging from 24 to 32 inches. Each arm on this 3 monitor mount supports up to 15.4 lbs, compatible with 75x75mm or 100x100mm VESA patterns. This 3 monitor stand is the ultimate solution for a sophisticated and highly functional multi monitor mount.

What is a 3 arm monitor mount?

This 3 monitor stand is the ultimate solution for a sophisticated and highly functional multi monitor mount. Effortless Viewing Adjustments: Crafted with counter-balanced gas spring arms for smooth adjustments, the 3 arm monitor mount offers complete control with the ability to tilt, swivel, and rotate each monitor independently.

Should you buy a triple monitor mount?

The only major flaw we found was universal across nearly every triple monitor mount we researched: the middle display offers monitor rotation, adjustable height, tilting, and swiveling, but not the ability to adjust its depth. If you have a particularly deep desk, you may want to go with our freestanding pick.

What are the different types of monitor mounts?

Every mount here provides this in some way, from hidden cable routes to simple hooks. Clamp vs. Freestanding: There are two main styles of mounts used for triple monitors: clamp-on and freestanding. Clamp-on mounts, well, clamps to the side of your desk, while freestanding mounts use their own base to support themselves.

How much weight can a monitor mount support?

The body of the mount is completely made out of steel, but it can only support monitors up to 24-inches and 15.4 pounds on each arm (both flat and curved).

There are also a couple of hooks on each arm for cable management. While it lacks the articulation of more expensive mounts, the price makes up for that.

How do I know if my monitor is a VESA mount?

Mounting Type: All the mounts here use VESA mounts ---the standard mounting method used for monitors. Not all monitors have the mount, but fortunately, it's pretty easy to tell if yours does. Just look at the back of your displays and see if there are four screw holes in a large, square formation. If that's there, you're good to go.
