# United Arab Emirates insol energy

## Overview

---

The UAE has massive solar generation potential, and its energy policy has shifted substantially due to the declining price of solar. The Dubai Clean Energy Strategy aimed to provide 7% of Dubai's energy from clean energy sources by 2020 and planned to increase this target to 25 per cent by 2030 and 75 per cent by 2050. The country, however, generated only 3,8% electricity from solar in 2020, reaching the target three years late.

### Solar energy in the United Arab Emirates: A review

The primary goal of this work is to assess the potential of solar energy as an essential future energy source in the oil-rich United Arab Emirates. The findings of this study are based on the national energy production and consumption portfolios, detailed quantitative analysis of the solar energy resource, the local operating conditions of

### Smarter Window Selection for Smarter Energy Consumption: The ...

The energy consumption levels of buildings in the United Arab Emirates (UAE) are among the highest in the world. One of the main reasons for this energy consumption is the need to cool buildings due to the hot climate of the UAE. As a large part of the heat accumulated inside buildings comes from windows, in this study, the effects of window size and direction in ...
