Uzbekistan ammonia energy storage

Overview

ACWA Power and the Uzbek government will jointly develop a pilot-scale renewable hydrogen facility, which is to be integrated with an existing ammonia & fertilizer plant outside the country's capital Tashkent. The pair will also explore the feasibility of a 500,000 tonnes per year renewable ammonia facility in the Central Asian country.

ACWA Power and the Uzbek government will jointly develop a pilot-scale renewable hydrogen facility, which is to be integrated with an existing ammonia & fertilizer plant outside the country's capital Tashkent. The pair will also explore the feasibility of a 500,000 tonnes per year renewable ammonia facility in the Central Asian country.

ACWA Power's expertise in green hydrogen, green ammonia, and clean energy has greatly strengthened our collaboration with the Government of Uzbekistan. Our latest venture into Battery Energy Storage Systems (BESS) is a significant step forward in our partnership and a clear demonstration of our commitment to transform the energy landscape in .

The second project involves the development of a 500,000-tonne green ammonia feasibility study. Since this project will reduce Uzbekistan's dependence on natural gas by 600 million cubic metres per year, it is expected to cut carbon dioxide emissions by 1.5 million tonnes annually. The study will conclude by the end of next year.

The first phase, a 3,000 tonne green ammonia pilot project, is already underway following the signing of the hydrogen purchase and power purchase agreements in May 2023. Once the second phase is complete, 2.4 GW of wind energy will power the production of 500,000 tonnes of green ammonia per year.

Saudi Arabia's ACWA Power Co (TADAWUL:2082) has signed a deal with the government of Uzbekistan to build a green hydrogen plant near the capital Tashkent and a green ammonia pilot facility as part of an ambitious investment programme in the Central Asian country. How many green projects does ACWA Power have in Uzbekistan?

The study will conclude by the end of next year. Aside from these green hydrogen and green ammonia projects, ACWA Power also has five existing projects in Uzbekistan, including four wind projects and a combined gas cycle turbine facility. The country is the second largest in terms of value for the company after its home market of Saudi Arabia.

Is Uzbekistan launching a green hydrogen project?

Bukhara, Republic of Uzbekistan; 29 November 2023: Saudi-listed ACWA Power, the world's largest private water desalination company, leader in energy transition and first mover into green hydrogen, has broken ground on the first phase of a 3,000 tonne-per-year green hydrogen project in Uzbekistan.

Why is ACWA Power partnering with Uzbekistan?

ACWA Power's expertise in green hydrogen, green ammonia, and clean energy has greatly strengthened our collaboration with the Government of Uzbekistan.

How will Bukhara project help Uzbekistan transition to a low-carbon economy?

Another 500 MWh BESS will be located in Bukhara, and the project will include overhead transmission lines to help dispatch power to the grid. The projects will play an instrumental role in achieving Uzbekistan's ambitious targets to transition to a low-carbon economy as well as diversify its energy sources.

Why should Uzbekistan integrate Bess into the grid?

By incorporating BESS into the grid, Uzbekistan will soon have the largest battery energy storage facilities in the region which will play a crucial role in stabilising the grid while promoting renewable energy in the Republic. The BESS will help to mitigate the effects of intermittency that are inherent in renewable energy sources.

ACWA breaks ground in Uzbekistan

ACWA Power reports that it has broken ground on a 3000 t/y green ammonia project in Uzbekistan, following the signing of hydrogen purchase and power purchase agreements in May 2023. This is the first phase of a project that will eventually see 2.4 GW of wind energy powering the production of 500 000 tonnes of

green ammonia per year.

Green Ammonia for Energy Storage

Overall, ammonia seems a very promising energy storage medium and carrier, but most of the ammonia produced globally is used for fertilizers and comes from the consumption of about 2 percent of the world's energy which leads to about 1.6 percent of global CO₂ emissions. The ammonia produced by utilizing renewables via the Haber-Bosch process

Uzbekistan renewable pilot progresses

LONGi Hydrogen announced the delivery of four 1000Nm³ per hour high-current-density, medium-pressure alkaline electrolyser units to ACWA Power's renewable ammonia pilot project in Uzbekistan. The 3,000 tons per year hydrogen pilot will eventually scale to 500,000 tons of ammonia production per year, becoming ACWA's second utility-scale
