Below is a brief summary of the technical specifications of the IronRidge Ballasted Roof Mount platform. More detail will be provided in the following pages. If there is additional information you require that is not listed in this.

IronRidge provides a comprehensive platform for designing a wide variety of photovoltaic systems for ballasted roof mounting applications. Due to its modular architecture, it can handle nearly all commercially available PV.

Photovoltaic mounting systems (also called solar module racking) are used to fix on surfaces like roofs, building facades, or the ground. These mounting systems generally enable retrofitting of solar panels on roofs or as part of the structure of the building (called ). As the relative costs of solar photovoltaic (PV) modules has dropped, the costs of the racks have become.

The IronRidge Seismic Anchor uses the EcoFasten Eco44R to attach to the roof structure and our customer bracket to securely attach to the Ballast Tray. Both the Seismic Anchor and Ballast Tray contain slots to accommodate for placement variances, up to +/- 4 inches.

The invention relates to a novel mounting mode of a photovoltaic bracket of a color steel roof, which comprises the following steps: firstly, welding an I-shaped steel beam at the lower.

PV brackets can be divided into three types: fixed, tilt-adjustable, and auto-tracking type, and its connection method generally has two forms of welding and assembly. Among them, fixed-type bracket includes roof-type bracket,

ground type bracket, and water type bracket.

Install a mounting system for solar thermal or solar photovoltaic panels. Consider the roof type (material and slope), weatherproofing, installation convenience, and wind and snow loadings. Choose an appropriate racking and mounting system for the type of PV module, and install the system along with needed flashing and seals.

Photovoltaic mounting systems (also called solar module racking) are used to fix solar panels on surfaces like roofs, building facades, or the ground.
