Ground-mounted solar panels are free-standing solar arrays installed at the ground level rather than on the rooftop and are supported with a pole or a metal frame. Both the ground-mount and rooftop-installed solar panels function in a very similar manner.

Solar Panel Grounding: Why, Where, How & When to do it. Solar Solution is the independent source for clear and reliable information on Off Grid Energy Systems.

Equipment grounding required: Exposed non-current-carrying metal parts of PV module frames, electrical equipment and conductor enclosures must be grounded. Structure as equipment grounding conductor : Devices listed and identified for grounding the metal frames of solar modules or other equipment can bond exposed metal surfaces or other .

In this blog, we will explore ground-mount solar panels, typically installed in yards rather than on roofs. We will also compare rooftop and ground-mounted solar panels so that you can decide which type of solar power system is suitable for your application, both in terms of pocket size and efficiency in terms of power.
