The BoxPower SolarContainer is a pre-wired microgrid solution with integrated solar array, battery storage, intelligent inverters, and an optional backup generator. Microgrid system sizes range from 4 kW to 60 kW of PV per 20-foot shipping container, with the flexibility to link multiple SolarContainers together or connect auxiliary arrays.

BoxPower containerized power systems are fully integrated with solar power, battery storage, intelligent inverters, and optional generator backup. Expedite your project timeline and reduce costs by leveraging our modular, configurable microgrid solutions.

Integrated solar photovoltaic (PV), hydro power or fuel cell technology to help further reduce your organization's carbon footprint and move you closer to net zero carbon sustainability. Distributed energy storage solutions that allow you to minimize the impact of intermittent solar PV power.

Depending on its size, a solar micro-grid can be used to power one or multiple homes or facilities. Suninone manufactures and uses leading solar technologies, include them in our systems to create a micro-grid energy system for your business application or village or town. Is a solar photovoltaic system a small microgrid?

While pairing a solar photovoltaic system with energy storage to support a single building (behind the utility meter) may be considered a small microgrid by some, for the purposes of this document we use "microgrid" to refer to more complex systems that connect multiple buildings or facilities.

What are the benefits of a solar microgrid?

Cost-Efficient Operations: Solar microgrids empower businesses to reduce energy costs significantly. By harnessing solar energy, companies can offset reliance on traditional grid electricity, thus cutting down operational expenses.
Reliable Power Supply: Ensuring uninterrupted power is crucial for businesses.

What is energy storage in a hybrid microgrid?

Energy storage systems are a key component in a hybrid microgrid and guarantee short-term backup power. Caterpillar can provide on-site energy storage systems to help stabilize transient loads, supply and absorb alternating current (AC) power, increase renewable energy source utilization, and transfer energy from time-of-generation to time-of-use.

Why do I need an inverter for a microgrid?

The inverter provides the MicroGrid with as much PV energy as possible. If the load is less than the maximum capacity of the PV generator and if the batteries are already full (or the charging power of the inverter charger is too low), automatic PV power reduction will be required.

Are solar microgrids a viable alternative to traditional grid infrastructure?

Cost-Effective Infrastructure: Building traditional grid infrastructure in remote areas can be prohibitively expensive. Solar microgrids offer a more cost-effective alternative, requiring less upfront investment and shorter implementation times.

How many kW can a microgrid power a shipping container?

Microgrid system sizes range from 4 kW to 60 kW of PV per 20-foot shipping container, with the flexibility to link multiple SolarContainers together or connect auxiliary arrays. BoxPower offers standard SolarContainer options which we configure to fit your needs.
