Where can I see the solar power plant from aerial photography

Overview

In 2021, Hegen traveled through the United States, France, and Spain to photograph vast solar energy infrastructures that will be delivering clean energy for generations to.

The neatly-arranged circular facilities seen in Hegen's images are solar thermal power plants, which focus sunlight from thousands of moving mirrors called heliostats onto a central collector tower. While earlier designs of.

"Aerial photography, to me, is like data visualization for scientists," Hegen says in a 2022 interview with Fortune. "The elevated perspective has such a remarkable ability to show.

Aerial photographs of Mount Signal 2 Solar Farm, a 200MWdc photovoltaic solar project located 6 miles from the city of Calexico in Imperial County, California. This renewable energy source was constructed on 1,200 acres and

represents a major milestone for environmental sustainability in the region. Where are solar power production sites located?

Among the locations featured in The Solar Power Series are Ivanpah (California), Crescent Dune (Nevada), Les Mées (France), Planta Solar (near Seville, Spain), and Gemasolar (also near Seville). Most of these solar power production sites are kind of pilot projects and first of their kind constructed within the past 15 years.

What is aerial photography & how does it work?

These aerial images provide a unique perspective on how the construction of solar farms takes place. Aerial photography is exactly what it sounds like—photographs taken from the air. This type of photography can be taken from hundreds to thousands of feet in the air, depending on the size of the area you want to capture.

Where are Hegen's solar projects located?

The locations seen in Hegen's project include the Ivanpah Solar Power Facility in California's Mojave Desert, the Crescent Dunes Solar Energy Project in Nevada, the Les Mées Solar Farm in France, the PS10 Solar Power Plant near Seville in Spain, and the Gemasolar Thermosolar Plant that's also near Seville, Spain.

Where are photovoltaic solar panels located?

Photovoltaic solar panels cover several hills in China's Fujian province. # Reflected sunlight is directed at the tower of the Abengoa solar plant at Solucar solar park in Sanlúcar la Mayor, near the Andalusian capital of Seville, in southern Spain, on November 13, 2015. #.

Why should a construction company use aerial photography?

Additionally, photographs show various stages in the construction process so the construction teams can get a better understanding of the progress as such large solar projects come together. Aerial photography also provides an easy way for construction companies to showcase their work during the various stages of development.

Could solar power keep the planet powered for generations to come?

According to Hegen, solar power has the potential to sustainably power the

planet for generations, as in a single hour, the amount of power from the Sun that strikes the Earth is more than the entire world consumes in a year. My Modern Met features Hegen's mesmerizing aerial photos of enormous solar farms.
