# Wholesale solar power generation

## Overview

---

How much does solar power cost?

The weighted average wholesale price for solar PV-generated electricity was \$83 per megawatt-hour (MWh) in 2019, more than double the price paid to producers for electricity generated by wind, fossil fuels, or nuclear. The higher average wholesale price for solar PV relative to other technologies is partly driven by geography and timing.

What are the trends in wholesale electricity prices in 2023?

Notable trends in 2023 Introduction Wholesale Figure 1. Average wholesale electricity price (2023\$/MWh) numerous generation electricity prices are driven by solar including costs affected a growing declined in 2023 compared to 2021 and 2022. Average prices are calculated based on.

What is the wholesale electricity market portal?

The Wholesale Electricity Market Portal was launched by the U.S. Energy Information Administration (EIA) in March of 2024 to help users examine and access electricity markets data in the seven Regional Transmission Organizations (RTO) and Independent System Operators (ISO). Key data sets include:

Why are wholesale electricity prices higher?

Wholesale electricity prices are generally higher when electricity demand within an area is greater. Because consumer demand for electricity varies throughout the day, the time of day when generation occurs also influences wholesale prices.

What drives wholesale electricity prices?

Wholesale electricity prices are driven by numerous forces, including a growing amount of wind and solar power. Market forces can include generation costs affected by fuel prices (especially natural gas), or high levels

of demand driven by hot weather (such as air conditioning), or tight markets where demand is nearly equal to all available supply.

Why are solar PV prices so high?

The higher average wholesale price for solar PV relative to other technologies is partly driven by geography and timing. Wholesale electricity prices are the prices that electricity retailers, such as utilities, pay electricity producers, such as power plant owners and operators.
