Wind powered homes Central African Republic

Wind powered homes Central African Republic

Central African Republic: Wind electricity capacity

The Central African Republic: Wind electricity capacity, million kilowatts: The latest value from 2022 is 0 million kilowatts, unchanged from 0 million kilowatts in 2021. In comparison, the world average is 4.73 million kilowatts, based on data from 190 countries.

ENERGY PROFILE Central African Republic

Onshore wind: Potential wind power density (W/m²) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.

Wind Farms in Central African Republic , RESDM

Find wind turbine locations in Central African Republic through our Central African Republic wind farm map. Analyze the main characteristics of wind farms in this country, sort these by capacity, number of turbines and landscape area.

Property For sale
