The working principle of a photovoltaic (PV) cell involves the conversion of sunlight into electricity through the photovoltaic effect. Here's how it works: **Absorption of Sunlight:** When sunlight (which consists of photons) strikes the surface of the PV cell, it penetrates into the semiconductor material (usually silicon) of the cell.

Solar panels work by converting incoming photons of sunlight into usable electricity through the photovoltaic effect.

Key learnings: **Solar Cell Definition:** A solar cell (also known as a photovoltaic cell) is an electrical device that transforms light energy directly into electrical energy using the photovoltaic effect. **Working Principle:** The working of solar cells involves light photons creating electron-hole pairs at the p-n junction, generating a voltage .

The thermal effect is a bothersome issue related to various types of photovoltaic (PV) panels in real working conditions. In this paper, we demonstrate a new and simple hydrogel cooling method that is inspired by marine mussels. We design an organic-inorganic hydrogel with all-weather adhesive and tunable cooling functions.
