Yilong New District Photovoltaic Support

Overview

What is Yilong new district?

Yilong New District is positioned as an international ecological smart city and a national new district with an output value of 100 billion yuan. The design site is located in a mountain region of Guizhou Province, China, which is now facing an economic recession.

Why should we design the Yilong new district?

This process is expected to enhance the achievement of the comprehensive goals of reducing living space, saving time and resources, and providing a greater proportion of and better access to nature (Fig. 9.13). The final design layout of the Yilong New District with four essential layers of the next form of human settlement.

Why do we need to monitor photovoltaic power development in China?

Particularly, in China, the number and scale of photovoltaic (PV) power stations have grown unprecedentedly in the last decade. There is an urgent need to monitor the PV power development in order to accurately estimate national renewable potentials and understand the ecological impacts.

Why are PV power stations growing in China?

Energy policies are the main factor driving the rapid development of PV power stations in China (Fig. 10 a) (Yang et al., 2020). Since 2004, China's PV production has experienced tremendous growth due to the dramatic increase in demand for PV in European countries and reached number one in the world in 2007 (Xu, 2016).

Do solar photovoltaic interventions reduce rural poverty in China?

Zhang, H.; Wu, K.; Qiu, Y.; Chan, G.; Wang, S.; Zhou, D.; Ren, X. Solar photovoltaic interventions have reduced rural poverty in China. *Nat. Commun.* 2020, 11 (1), 1969 DOI: 10.1038/s41467-020-15826-4 McPherson, M.; Johnson,

N.; Strubegger, M.

Why are PV installations growing so fast in China?

(3) The rapid growth of PV installations in China, from 1 Gigawatts (GW) in 2010 to 306 GW in 2021, is attributed to significant policy and financial support (e.g., direct fiscal subsidies, preferential loan interest rates, and tax incentives (4–6)) from the central government.

Yilong New District Photovoltaic Support

Photovoltaic power station in North China's village

Aerial photo taken on Aug 3, 2021 shows a photovoltaic power station in Tujing village, Yunzhou district of Datong city, North China's Shanxi province. The photovoltaic power station, built ...

Optimal Design of Multilayer Optical Color Filters for Building

of photovoltaic (PV) modules. For example, implementing ceramic inks has been proven to produce PV modules with an almost unlimited color (and pattern) versatility.[6,7] Other techni ...
